Requirements & Setup

Requirements

Unity 2022.3 or higher is required since that is the min version Unity allows for new assets in the store. However it may work just fine in older versions of Unity with minor changes.

Usage

Once installed you will find a new „Text Auto Size“ section at the bottom of the „Text“ area.

If you enable the Text Auto Size checkbox it will instantly take control of you textfield.

NOTICE: If auto-size is turned on then the normal „Size“ attribute will be ignored.

Known Issues

If you turn of the Auto Size in the inspector then the UI Builder may not immediately re-apply the normal text size. Please just change the „Size“ attribute once to force an update.

This has no effect on the runtime, it's just a UI Builder oddity (one of many).
